Please cancel claims 29-32, without prejudice, and amend claim 28 as follows:

1-27. (Canceled)

28. (Currently Amended) A reflection-type liquid crystal display device comprising:

a light guide plate having a polarizing element stuck or adhered thereto on the side facing a reflection-type liquid crystal display panel, the polarizing element maintaining a predetermined air gap relative to the reflection-type liquid crystal display panel;

a source of light arranged on an end surface side of the light guide plate; and

a light-diffusing function imparted to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

wherein the reflection-type liquid crystal display panel has a rough surface on the side facing the light guide plate, and a haze (H) defined as an index represented by a ratio of a diffusion transmission factor (T_d) and a total light ray transmission factor (T_t) is given by:

 $\underline{H[\%]} = (\underline{T_d}/\underline{T_t}) \times 100,$

the haze being less than 50%.
